

## ADVANCED SOFTWARE ENGINEERING ASSIGNMENT-3

This is an app that gets the details like location and along with image. In this app we have first created a signup form or registration form after filling which we can take a snap and the image will be stored temporarily. Later when we asked to get the location details , the applications displays image along with the location.

In this app we have used Android Studio and JDK software through which all the functionalities have come to work.

Sequence:

Step 1: Fill the details and proceed to signup button.

Step2: Take a snap shot (Image).

Step3: Display of the taken image.

Step4: Location will be shared with image on top of the details.

Application Result:
